

Red and Black

A game for two players

Skills Subtraction of integers.

Equipment Pack of cards (use Ace (1) – King (13)) with red cards representing negative numbers and black cards representing positive numbers.

Rules Shuffle the cards and share evenly between the two students.
Cards are placed in 2 piles face down on the table
Both students turn over 2 of their cards and work out the difference (card 1 – card 2). The student whose answer is smaller keeps all of the cards on the table. If both differences are the same students have another turn.
This continues until one student has all of the cards.
