

Stay on Line

You need a classmate

Game

Draw the grid below into your books.

Using a pencil, draw lines between boxes to make addition and subtraction equations.

Take turns with a classmate to see how many addition and subtraction equations you can make.

You can move horizontally, vertically, or diagonally in any direction, and you can add or subtract two or three numbers at a time, but all your numbers must connect to each other.

You cannot move your pencil through a square without using it in your equation.

For example, $6 + 1 = 7$, $15 - 10 = 5$, or $5 + 4 + 9 = 18$.

20	6	14	11
7	1	3	8
13	4	5	13
18	9	10	15
