Snakes with scarves

We are exploring repeating patterns using snakes made of different coloured cubes. We are predicting what cubes have been hidden when the snake puts on a scarf.

Ask your child to tell you about the pattern of this snake and how the pattern could be continued.

Predict which cubes do you think are hidden under this scarf?

Can you and your child find some simple repeating patterns like this around your home? You could talk about them and play a game covering parts of them and saying what is hidden.

For example, use cutlery (spoon, spoon, fork,... and a napkin to cover), stones and shells, felt pens and pencils, hairties and hairclips, paper clips and rubber bands...
