

The Horse Race Game

The Horse Race

Play this game with three players. Each player needs two counters of one colour. You also need two standard 1–6 dice to share.

Take turns to choose your horses by placing a counter on horse's number.

Roll the dice and find the difference. For example, if 2 and 5 come up the difference is $5 - 2 = 3$. The horse whose number matches the difference moves one space towards the finish.

It doesn't matter who rolls the dice each time. The first horse to cross the Finish line is the winner.
