

Books vs bean bags: Part 3

A school is going to upgrade the school library.

Some students investigated the question, “How do People Use the Library?”

They surveyed students and teachers from their school. One of the students in the class came up with this set of bar graphs showing the results of the survey.

Use this display of data to highlight the key findings of the investigation, which will give recommendations for the school as to how they should spend their library upgrade budget.
