A long dinner

A restaurant makes a super-long table by placing 4 normal tables end to end for a big party.

Each normal table usually seats 6 people around it.

How many people can sit down to eat at the long table?

1. How many people sit around one table?
2. What happens when 2 tables are pushed together? How many people fit around?
3. How many people fit around 3 tables?
4. What pattern can you see?
5. How many people will fit around four tables placed end to end?
