

## 10s Pairs to 100

### Why do it?

To help your child to learn the multiples of 10 that add to 100.

### What you need:

Game cards – You can print these or make your own.

### What to do:

This game for two players. Shuffle the pack and deal 5 cards to each player. The remaining cards are placed in a pile face down between the players. The aim is to make pairs of numbers that add to 100. The winner is the first person to put all their cards into pairs.

### Pairs to make:

10	90
20	80
30	70
40	60
50	50
60	40
70	30
80	20
90	10

The players look at their cards and place any pairs they have on the table. The first player asks the other person for a card to make a pair. For example “Do you have 40?”

If the other player has the card they give it to them. If not they say “Go Fish” and the first player takes a card from the pile.

The other player then has a turn. The game continues until there is a winner.

### What to expect your child to do:

- To be able to find pairs of numbers that add to 100.

### Variation:

Help your child to skip count using fingers. For example if they have 60 then skip count 70, 80, 90, 100 on their fingers to find they need 4 tens or 40 to make 100.

Memory: Spread out all the cards face down. First player chooses two cards. If they add to 100 the player keeps the pair and has another turn. If the cards do not add to 100 turn them face down again in the same place. The next player has a turn. The winner is the player with the most pairs.

Snap: Share out the cards. The first player puts down the first card, face up. The next player puts down a card on top of the first card. If the two numbers add to 100 the players call out ‘Snap!’ If the numbers do not add up to 100 the next player puts down the next card.
