

## Addition and Subtraction to 10 Quick Recall

### Why do this?

You can help your child to instantly recall the addition and subtraction facts up to 10.

### What you need:

Addition and subtraction cards. You can print these or make your own.

Three containers or jars labeled “learning” “later” “quick”

### What to do:

Print out the cards and glue them to light cardboard. Work with your child to write the answers on the back.

Learning: Cut out four cards from a family of facts and put them in the “learning” container.

For example:  $2 + 3$ ,  $3 + 2$ ,  $5 - 2$ ,  $5 - 3$ .

$2 + 3$	$5 - 2$
$3 + 2$	$5 - 3$

Later: Put the other cards in the “later” container. It is easier to cut the cards to individual cards as you need them.

Quick: As your child gets quick at giving the correct answers put the cards in the “quick” container.

Don’t rush as it is important they know the family of facts before a new family of facts is moved from the “later” container to the “learning” container.

### What to expect your child to do:

- To recognise that the facts in a family of facts are related.
- Over time expect your child to instantly recall the addition and subtraction facts.

### Variation:

Practise cards from the “quick” container when the “later” container is empty.

Ask your child to take one card and name another member of the same family of facts.

Use your home languages to do this activity.

Addition and Subtraction to 10 Quick Recall

$2 + 3$

$5 - 2$

$3 + 2$

$5 - 3$

$2 + 4$
