

Adding Multiples of 100

Why do it?

You can help your child to practise adding multiples of 100 that make 1000.

What you need:

- Game cards. You can print these or make your own.
- Cardboard.

What to do:

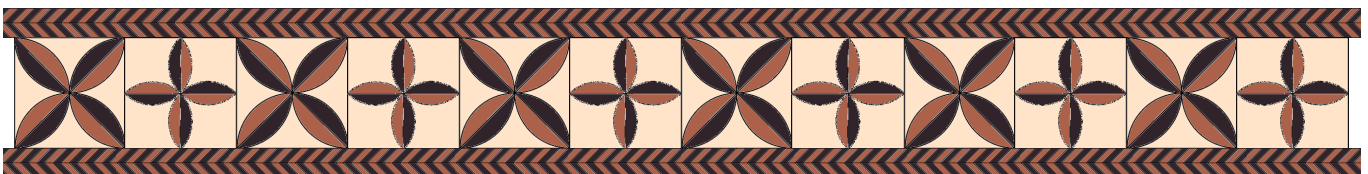

- Glue the cards on to cardboard. Cut the number cards, shuffle them and deal three cards to each player. The remaining cards are placed in a face down pile between the players.
- Each player tries to make pairs that add to 1000 and place the pairs on the table. For example, $200 + 900 = 1000$.
- The players take turns to take a card from the pile. If the player can use it to make a pair she / he can keep the card and then place the pair on the table. If not, the card is returned to the bottom of the pile.
- The winner is the first player to pair all of their cards.

What to expect your child to do:

- To use their basic facts to 10 to help them correctly make pairs that add to 1000. For example $3 + 7 = 10$ and $300 + 700 = 1000$.

Variation:

- Use the fact cards as flash cards and ask your child to quickly give you the missing number as you show them the cards.
- Use your home language to do this activity.
- Practise basic facts to 10 together.

Adding Multiples of 100

100	200	300
400	500	600
700	800	900
100	200	300
400	500	600
700	800	900
