

Domino Pairs to 100

Why do it?

You can help your child to recall fraction, decimal and percentage conversions.

What you need:

Set of 20 Domino Cards. You can print these or make your own.

What to do:

Cut out the 20 domino cards.

Deal three domino cards to each player. Place one domino face up between the two players and the remaining cards in a pile face down. Players take turns to match of their domino cards to the cards in the middle. Players match the two numbers that add to 100.

For example:

	95	5	10	90	
--	----	---	----	----	--

The next player can now match to either the 5 or the 10. Pick up from the face down pile if you do not have a domino to add to the line. The winner is the first player to use all their domino cards.

What to expect your child to do:

- To recall the pairs of numbers that add to 100.

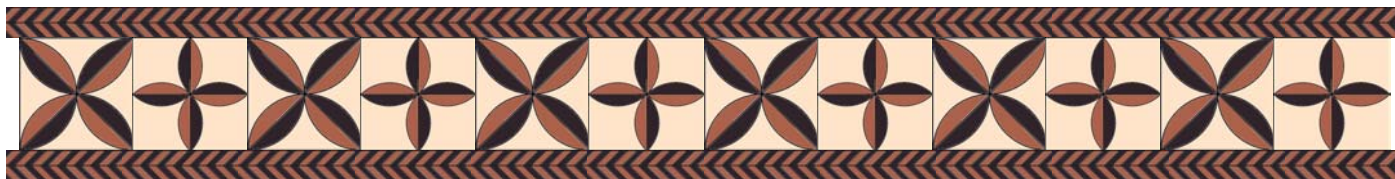

Variation:

Children can take all the cards and arrange them so the ends match to form one continuous line.

You can use the dominoes to call out numbers for your child to respond with the number that adds to 100.

Make another set of domino cards using different numbers.

Play this game using your home languages.

Domino Cards

5	10	90	30	70	60	40	80	20	65
35	40	60	20	80	50	50	70	30	75
25	90	10	5	95	10	90	15	85	25
75	35	65	45	55	55	45	85	15	95
