

Four In a Row Addition

Purpose:

The purpose of this activity is to help you child practice basic addition facts.

Link to the Number Framework:

Number Facts, Stage 5

What you need:

- The game template
- Counters in two colours
- Two markers to indicate the numbers being added.

What to do:

- Player One starts by putting a marker under two numbers in the row below the board.
- The numbers are added and the answer on the board is covered with a counter of their chosen colour.
- Player Two moves only one marker to a new number in the row beneath the board. The new combination is added together and the answer is covered with a counter of their chosen colour.
- Play continues until one player has four of their counters in a row vertically, horizontally or diagonally. They are the winner.
- If the answer to adding two markers together is already covered the player loses that turn.
