

Big Teeth

On average the teeth of:
an adult human are $1\frac{1}{2}$ cm long.
a great white shark are $7\frac{1}{2}$ cm long.

How many adult teeth, stacked end to end, would be needed to make the same length as the great white shark's tooth?

1. How can you represent the length of an adult tooth?
2. How can you represent the length on a shark's tooth using the same scale?
3. How many adult teeth are needed to make the length of one shark's tooth?
