

Flying-fish Soup

Activity

Pat got bored during the holidays.
 “What can I do, Gran?” he moaned.
 “You can help me make the dinner,” Gran said.
 “What are we having?” asked Pat.
 “We’re going to have Pretend Flying-fish Soup,”
 Gran laughed.

Gran gave Pat this recipe:

Pretend Flying-fish Soup

Ingredients for four people:

- 1 onion
- 1 tsp curry powder
- 1 tbsp oil
- 1 tsp salt
- 1 tsp pepper
- $\frac{1}{2}$ cups coconut cream
- $\frac{1}{2}$ kg fish

“You can get me these ingredients, Pat,” she said.
 “But this recipe is only for four people, and I’ll
 need enough for eight people.”

1. What amounts of each ingredient does Pat need to get?
2. Gran changes her mind and decides to make the soup just for Pat and herself.

What amounts of each ingredient would Pat need to get for two people instead of for eight people?

3. Gran wanted to make the soup for six people. How would you work out the amounts for each ingredient?
