

Hot Spots!

You need a thermometer

a classmate

Activity One

1. In your book, draw up three columns labelled:

Very Warm Warm Mild

Now, look at the temperature map and write down the names of the cities and towns in the correct column in your book.

2. Discuss with a classmate which places you have put in the “very warm” category and why.
3. Now discuss with your classmate your “warm” and “mild” locations.
4. How does the position of a city or town affect its climate?

Activity Two

Measure the temperature in the same spot every day for a week. Find the average of these temperatures.

To which category (very warm, warm, mild) do you think this average temperature belongs?
