

Quick Add

You need a classmate or enough people to play as 2 teams

Game

- Draw up two columns.
- Label the first column A and the second column B as Rachel has done here:

- Decide who will go first. That player writes the number 1 in either column A or column B . The other player writes the number 2 in either column.
- Take turns to carry on writing the numbers 3, 4, 5, and so on in either column. You cannot write a number in a column if that number is the sum of any two numbers already in that column.
- The game ends when one of the players cannot write a number. The winner is the person or team who writes down the last number.

Discuss: Is there an advantage to starting first?

This is what happened in Rachel and Leila's game:

A	B
2	1
3	5
4	

Oh, no!
Where can
I put 6?
