

Six Shooters

You need ✓ 3 classmates ✓ 3 dice
 ✓ 6 counters for each player
 (a different colour for each player)

Game

Decide who will go first.

When it's your turn, roll the three dice.

Choose two of the three numbers showing on the top faces of the dice and multiply them together.

If the answer to that multiplication is shown in one of the triangles above, place one of your counters over that answer.

If you can't cover any of the numbers in the triangles, miss that turn. Try again on your next throw.

The winner is the first player to get two of their counters in each of the three triangles.
