

What Goes Around Copymaster 5

Station 5

In this station we look for patterns in the perimeters and areas of squares.

Resources

- Square tiles
 - Squared paper
 - Coloured pens
1. Below are a 2 x 2 square and a 3 x 3 square. You may wish to make them with square tiles.
What is the difference between their perimeters?

2. Compare the perimeters of a 3 x 3 square with a 4 x 4 square.
Compare the perimeter of a square with the next biggest square.
What do you notice? Why does this occur?
3. Go back to the 2 x 2 and 3 x 3 squares. Compare the areas of these squares.
Compare the area of different squares with the area of the next biggest square.
What pattern do you notice?
Organising your results in a table may help:

Square	Area	Difference from next biggest square
1 x 1	1	3
2 x 2	4	
3 x 3		
4 x 4		
5 x 5		
6 x 6		

- Investigate the difference in areas and perimeters between rectangles and the next biggest rectangle, like 1×2 and 2×3 , 2×3 and 3×4 , 3×4 and $4 \times 5 \dots$
What patterns do you notice?
Try to explain why each pattern occurs
