

➤ Notes for parents. Activity next page.

The purpose of this task is to help your child to:

- read and show time on an analogue clock to the half and quarter hour
- add half an hour or an hour to a given time and show this time

Being able to tell the time is an important life skill.

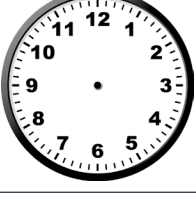

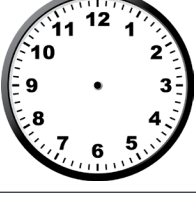

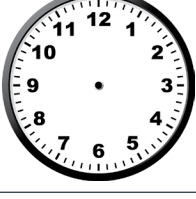

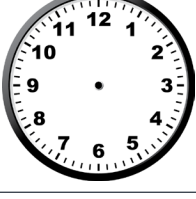

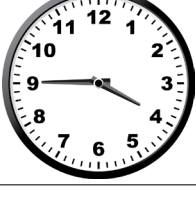

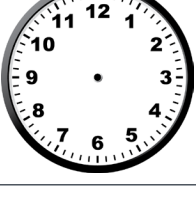

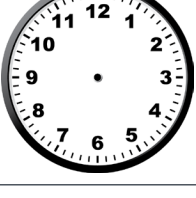

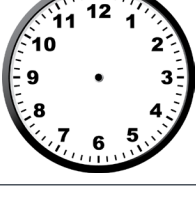

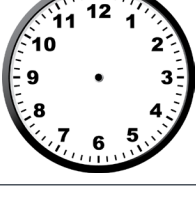

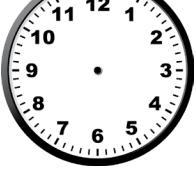

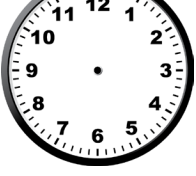

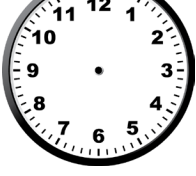

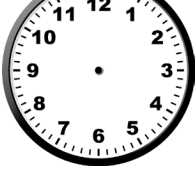

To truly understand digital time, it is important for a child to be able to tell the time on a clock face (an analogue clock).

You may like to print the following page or make a similar one of your own. Make sure your child has a pencil.

Talk about the task together, support them as required and encourage them to try again if they find it tricky.

Show the time on each clock.

The time now	Half an hour later	One hour later	Two hours later	Twelve hours later
				
				
				
				
				

For each 'time now', say what you might be doing at this time.
